

Gulendam Cetin

Jr. Backend Developer

Thanks to the algorithmic and programming mindset I gained through my engineering education, I have built a strong foundation in software development. I began this journey with Java and later gained experience in mobile application development using React Native. In my current internship, I take part in web projects using .NET Core and React, handle database design and management with PostgreSQL, and create API documentation with Swagger to ensure workflow transparency. With my strong communication skills and ability to work well in a team, I actively contribute to achieving shared goals.

Skills

- C#
- ASP.NET Core
- HTML / CSS
- React Native
- SQL

Language

Turkish
English

Experience

● May 2024 -
Taletro Information Technologies

Software Intern

As a Backend Developer at Taletro Information Technologies, I developed projects using ASP.NET Core Web API and PostgreSQL, and improved existing systems. I prepared API documentation with Swagger and managed integrations with RESTful services. I also developed user interfaces with React and ensured dynamic data flow through API integrations, creating performance-oriented applications by utilizing modern React features. Throughout this process, I enhanced both my backend and frontend development skills.

● July 2023 - September 2023
PigaSoft

Software Intern

By working at this company with a strong corporate culture, I gained firsthand experience in the importance of teamwork. Through learning programs and training sessions, I became familiar with the workflow of corporate life. At the same time, I was involved in mobile application development processes using React Native through assigned projects.

Education

● 2021 - 2025
Firat University - Computer Engineering

One of the leading universities in the field of computer science in Turkey, this institution offers various integration programs and internationally recognized diploma systems.

Projects

● Library Management System

In this library system developed with ASP.NET Core MVC, user management is handled using Identity. Administrators can add and edit books. EF Core (Code First) and SQL Server were used, and the interface was built with Razor pages.

● Restaurant Management System

In the table reservation system developed with ASP.NET Core MVC, users can make reservations, and administrators can approve or cancel them. User management is handled using ASP.NET Core Identity. Data operations are performed with Entity Framework Core and SQL Server.

● Villa Agency Management System

This project is a web application for listing villas and managing reservations. It was developed using ASP.NET Core MVC and ASP.NET Core Identity. MongoDB was used as the database. The application includes key features such as villa listing, image upload, dynamic pricing, and availability tracking.
